

21th ISTRO Conference Paris 2018

We are pleased to invite you to participate to the 21st International Soil Tillage Research Organization (ISTRO) Conference in Paris, which will be held from Monday 24th to Thursday 27th September 2018. ISTRO is an international association whose objective is to stimulate research on tillage and no till, compaction and, more broadly, to contribute to soil protection and to improve soil quality. The association also aims to foster the application of the results of such research into agricultural practice.

ISTRO organizes an international conference every three years to review progress in terms of research and innovation. The conference brings together 250 to 350 participants ranging from soil scientist to agricultural field advisers, engineers of technical institute or in agro-equipment and teachers.

The scientific topics during the conference will focus on advances in soil structure characterization, soil compaction, biogeochemical processes and carbon sequestration, with a special interest on soil ecology and ecosystem services. Equipment strategies will also be discussed with soil tillage strategies, smart farming, tires and tillage equipment design.

This conference will be an excellent opportunity to present researches, share ideas and develop new perspectives in soil and tillage research to address these challenges. You can get all the information on the conference website:

<http://istro2018.webistem.com>

ISTRO kindly invites you to submit abstracts until 1 March 2018
